

DECLARATION OF USE OF RESO STANDARDS

The purpose of RESO standards is to make the transport and consumption of listing content easier for all parties that are permitted to utilize the content. Being RESO certified on a particular standard indicates to the world that a given party or product has implemented that RESO standard and that listing content is available to permitted parties via that certified standard.

As such, RESO requires that for a party or product to maintain RESO certification, it must provide listing content to permitted recipients via the standard for which the party or product is certified.

I understand that RESO reserves the right to revoke certification if RESO determines in its reasonable discretion that my company or product is not providing listing content to permitted recipients via any RESO standard for which the company or product is certified.
