RESO Remote

digital tech summit

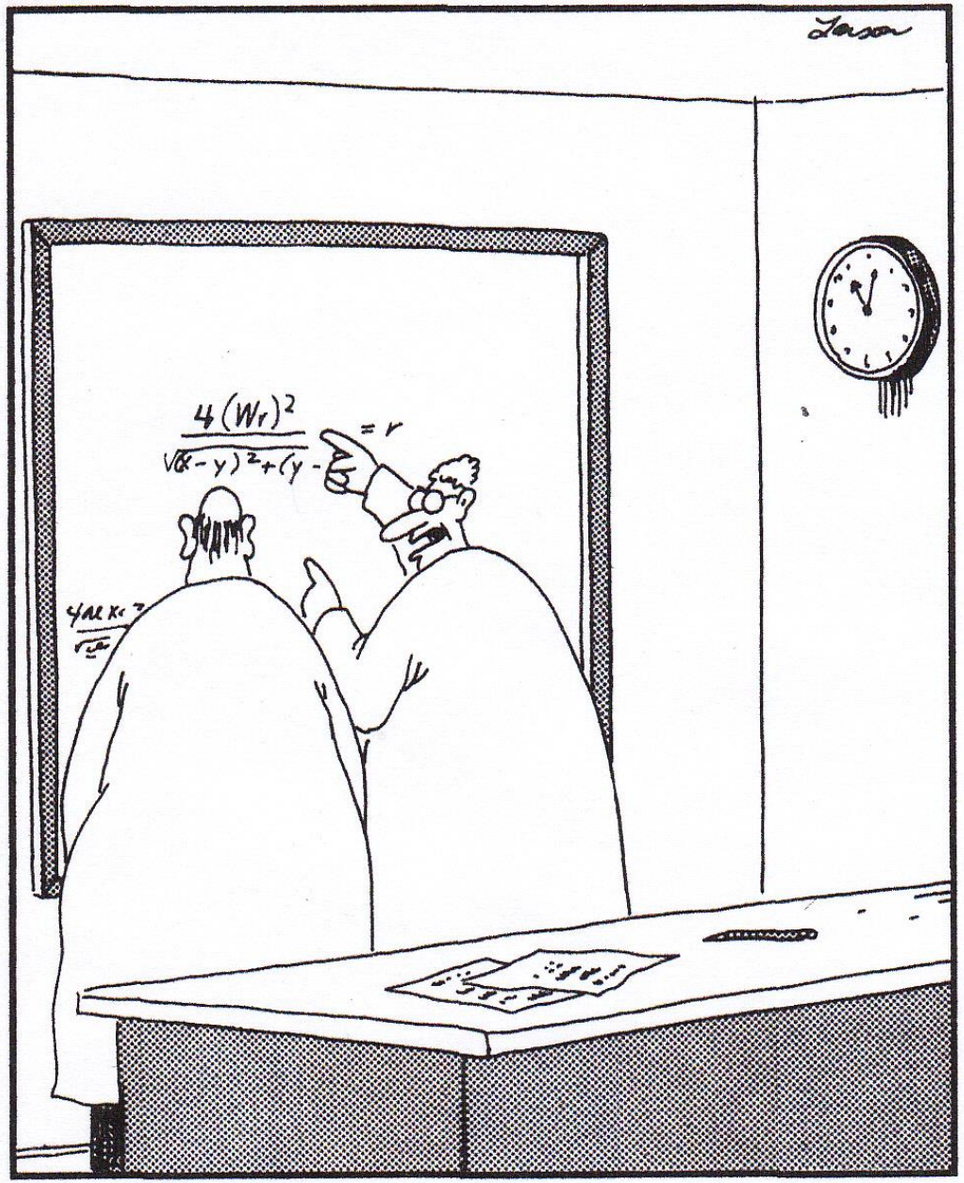
WE NEED A STANDARD TITLE

THIS WEEK'S MOST MEMETASTIC PRESENTATION

imgflip.com

"Why won't this @$!&%# thing work?"*

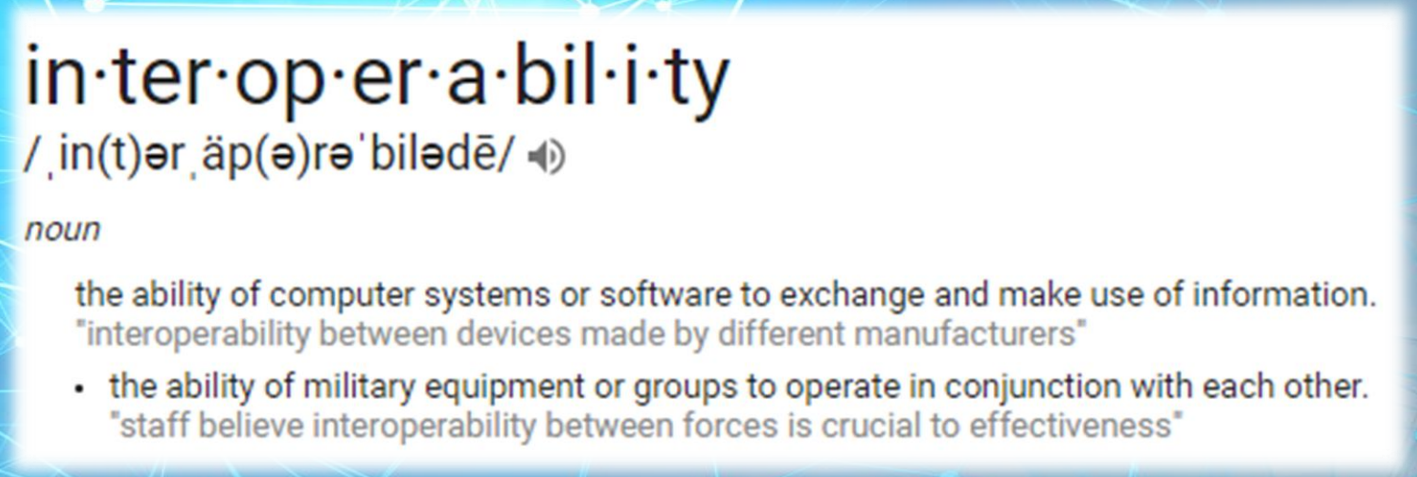
-A real estate agent somewhere right now, probably



"Yes, yes, I *know* that, Sidney… *every*body knows *that!*… But look: Four wrongs *squared,* minus two wrongs to the fourth power, divided by this formula, *do* make a right."

The RESO Interoperability Workgroup's purpose is to identify, through relevant business challenges and needs, solutions that will bring together disparate systems to better serve the real estate industry, especially the practitioners and brokerages.

The Interoperability Workgroup will study submitted business cases, partner with affected stakeholders and coordinate solutions that will produce ease and efficiency of business through the creation, maintenance and evolution of RESO Interoperability standards for the community.



Make things @$!&%# work**

*Translated from previous slide

Cooperate through Co-opetition

co-opetition: *noun*

where competitors agree to cooperate on certain aspects of the business but compete aggressively on others

"Co-opetition between vendors in real estate means competing on things that help your customers like innovative features, pricing, and ease of use…not competing in ways to make their lives difficult like trapping their own data in your system."

SPEAKER

Chris Haran, Workgroup Chair

That's me, to the right. I don't wear pocket squares anymore, but they sure look nice, don't they? In typical real estate fashion, this headshot is about six years old. I should probably update it…

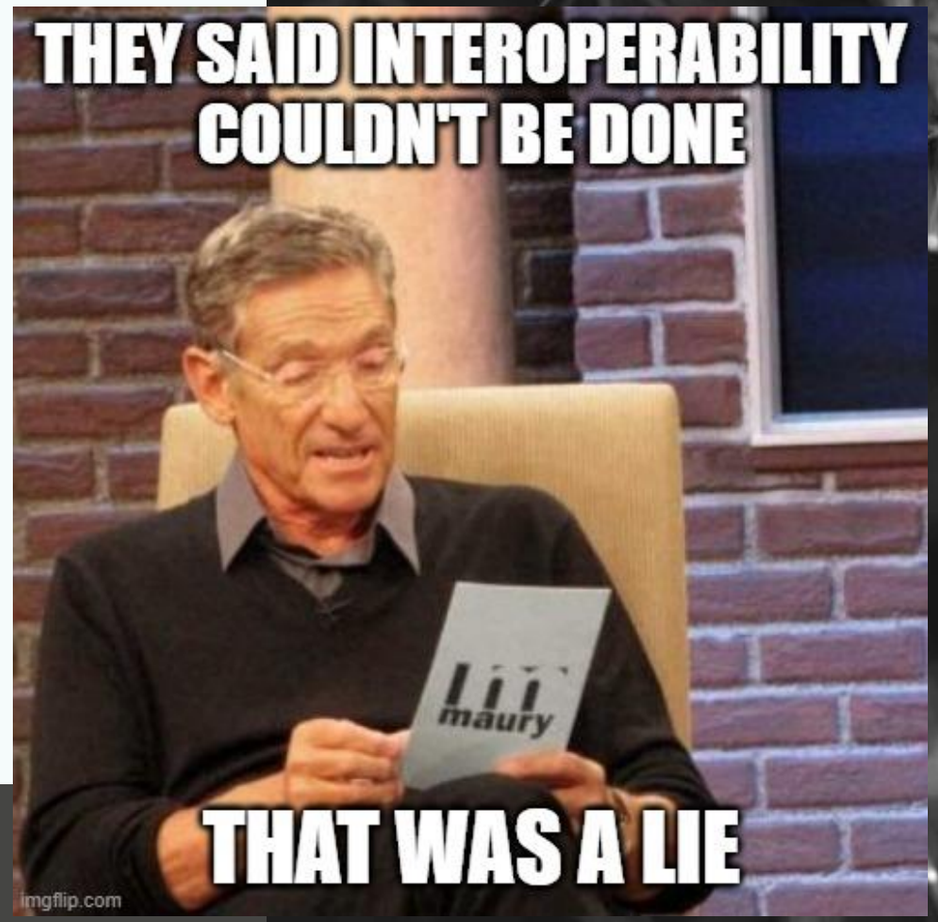
…are you still reading this? Good for you. I was giving the useful background talking through this slide, but I will have my contact information at the end of the presentation if you have more questions about my sartorial choices.

What has Interop been up to since St Louis?

Highlights

- Begun work on the Transaction Management Resource
  - Take a look in Confluence!

- 4 New Collections
  - **ActorType**: Roles that are typically involved in a transaction, requiring a level of access or permission (Will use existing *MemberType* and *TeamMemberType*)
  - **DocumentStatus**: Statuses a document could be in during a transaction
  - **TaskType**: Tasks used during a transaction, commonly associated with a checklist feature
  - **Permission**: Level of access attached to action, document, user, etc.



Let's get to work!

#RESOremote
REAL ESTATE STANDARDS ORGANIZATION

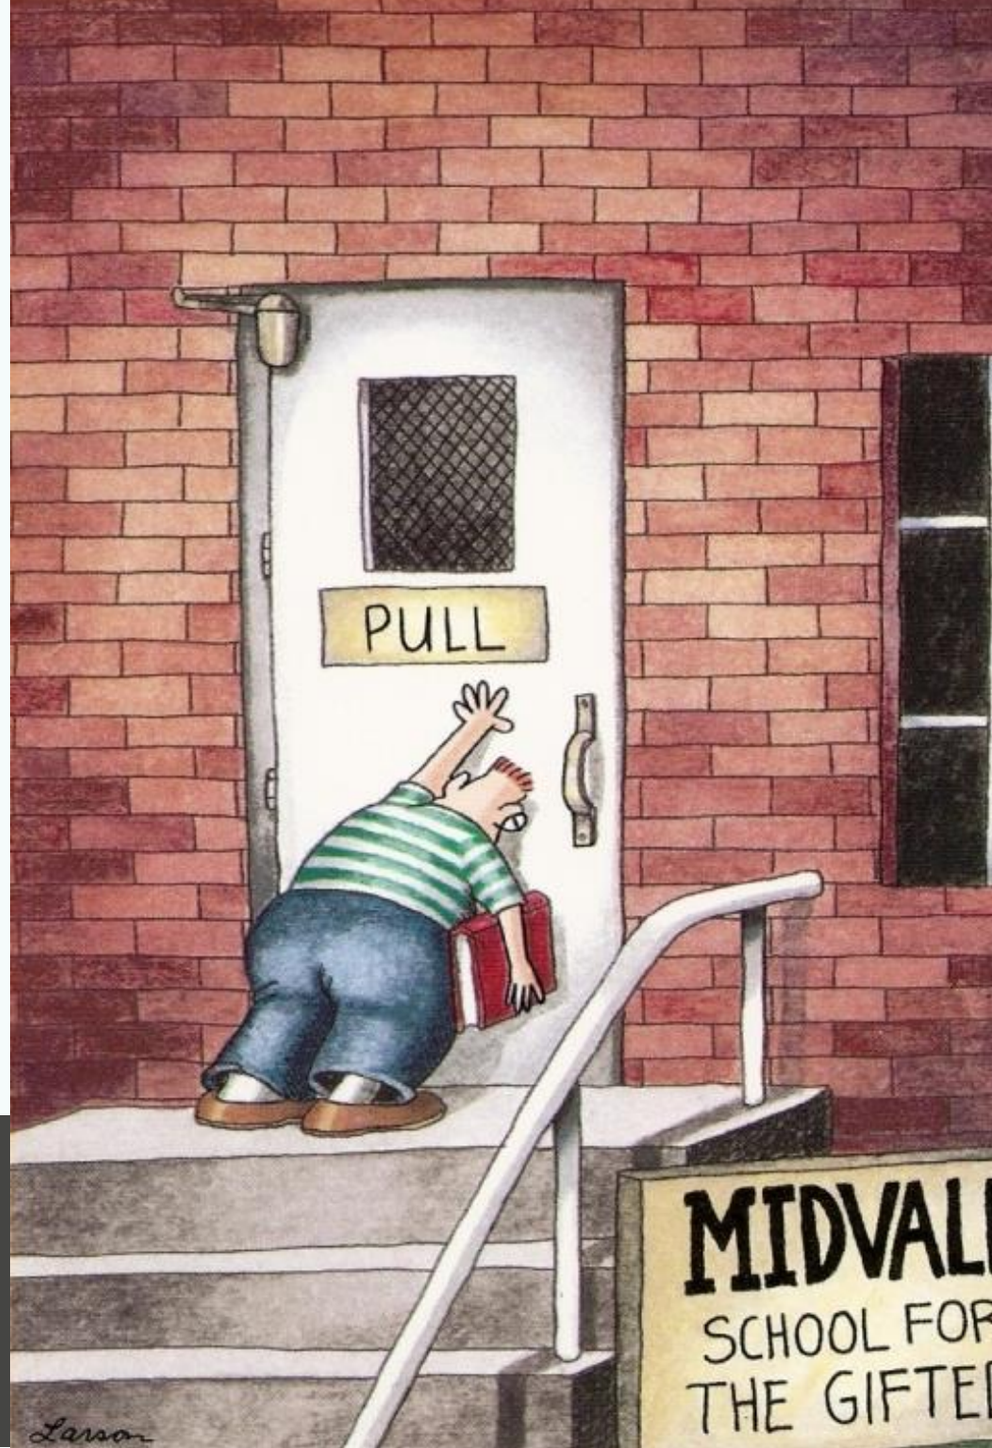
Do we vote now?

- Feedback on current collections
- For certification, what will be:
  MAY, SHOULD, MUST
- New work and ideas

Next Steps

- What do we want to do next?
  - Prototype using standards
  - Need two implementation for inclusions into Data Dictionary

- Call to action for participation
  - Brokerages and vendors with TMS platforms/applications



How does Interoperability extend beyond Transaction Management?

#RESOremote

REAL ESTATE STANDARDS ORGANIZATION

How do you get involved?

- 1 Tuesday per month at 2 pm CST
- Business focus, with a bit of technical
- Join the discussion with us on Confluence
- Leave comments if you are phone-shy
- Bring a friend (or two)

T. HANKS
